# International domain name (IDN) codes

---

---

## Introduction

You can register .com and .net domain names that use non-English characters. The Registry requires that the SLD be PUNY-encoded.

PUNY-encode the domain name and supply the **IDNCode** parameter in the **Purchase** command if you use real-time commands, or in the **AddToCart** command if you use our shopping cart.

An IDN conversion tool for PUNY encoding is available at <http://mct.verisign-grs.com/index.shtml>

## IDN codes

The table below gives the IDN codes for all languages supported by the .com and .net Registry.

Language	IDNCode
